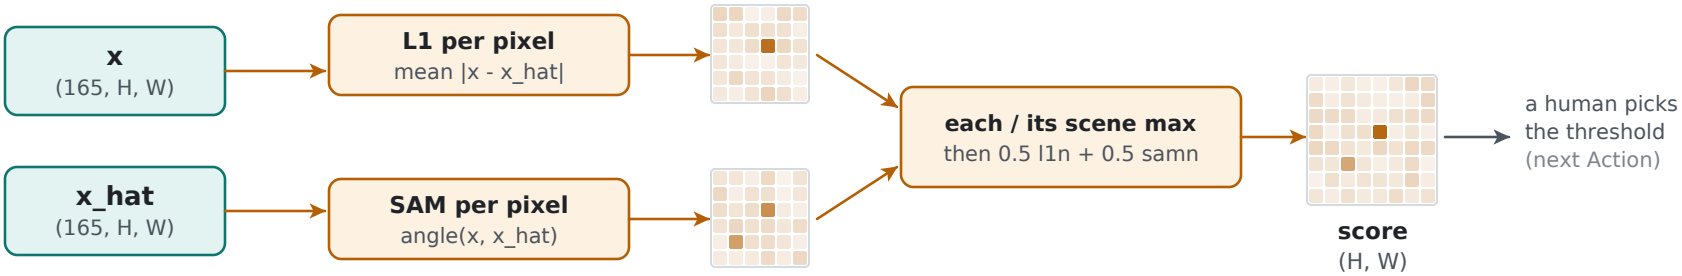
combined (the default): L1 and SAM are scaled to 0-1 by their scene maxima, then blended.



Worked: max L1 = 0.05, max SAM = 0.40 rad; a pixel with L1 0.025 and SAM 0.10 gives l1n = 0.50, samn = 0.25,
score = 0.5 x 0.50 + 0.5 x 0.25 = 0.375. The weight is sam_l1_alpha. One extreme pixel sets the max, so the scaling is fragile.
