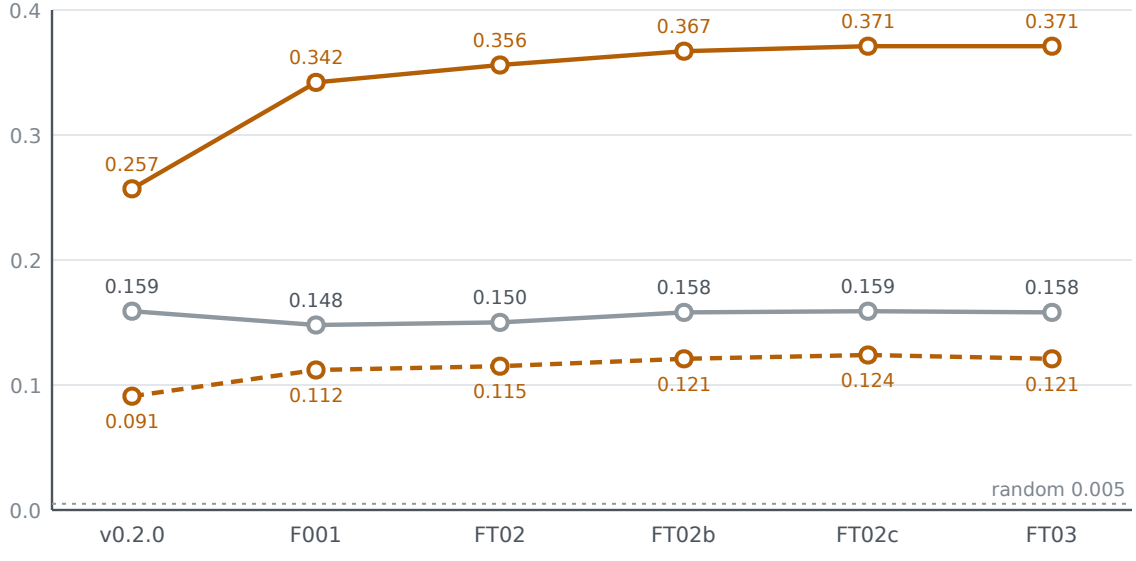
pAUC up to 1% false alarms, residual Mahalanobis, by model (random = 0.005)



implanted bench, easy tier

implanted bench, medium tier

real PRISMA bench (4 scenes)

Read 2026-10-17: the largest step is pretraining (easy 0.257 -> 0.342). **Corrected 2026-10-18: v0.2.0's points are a band-order bug.**

The real bench wanders 0.148-0.159 in no order: it cannot separate these models.

Not drawn: the subtle tier, at chance for every model.
